WHAT IS SOFTDRIVE?

Softdrive is a patent pending drilling system that absorbs & deflects torsional vibration and shock that is caused while drilling through transitional rock or broken ground. Alternatively known as a torsional shock absorber, the Softdrive tool makes drilling smoother, safer, and ultimately faster!

THE TORSIONAL SHOCK ABSORBER

The SoftDrive drilling system uses its robust design advantage to catch and diminish damaging torsional spike events such as vibration and shock.

OUR #1 GOAL IS TO
CREATE THE BEST AND
SAFEST
MINING CONDITIONS.

ULTERRA'S SOFTDRIVE
DELIVERS ON
SMOOTHER DRILLING!

- PREVENT TOP DRIVE STALLS
- REDUCE ROD RATTLE
- INCREASE BIT LIFE

**BRINGING YOU FIRST CLASS DRILLING
EXPERTS WITH YEARS OF EXPERIENCE AND EXPERTISE.**

THE MARQUE OF A NEW ERA

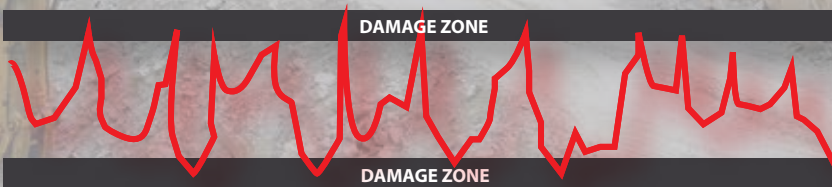

PERFORMANCE AND SAFETY

By taking the edge off critical vibration and shock events that occur in everyday drilling, the SoftDrive drilling system promotes a new era of driller safety by reducing the number of times you have to get out of the cab while drilling a bench. Whether it's because of tool changes or rig maintenance, the SoftDrive lets you settle into your drill and get the job done right!

THE DIFFERENCE IS IN THE DATA

VIBRATION WITHOUT A SOFTDRIVE

SMOOTHER DRILLING WITH A SOFTDRIVE

A torsional harmonic dampener which uses calibrated elastomers to deflect shock and vibration spikes.
